Assignment 7 - JSON. Fragments

Due to: the next lab class.

Part 1 - **Build an thecat API.**

Parse the result .xml file from ″http://thecatapi.com/api/images/get?format=xml&results_per_page=10″
(results_per_page=10 fetches 10 cats, you can change this number depending on how much you want to fetch)
and build an app such that it displays list of cat images with their names as shown below:

You can use the following library to convert XML to JSON format:
https://github.com/smart-fun/XmlToJson

Create a landscape variation of the project and use fragments to show the cats. On the left side list of the cats and on the right side details of the cat (like image, url, source, etc.);
